IN THE CLAIMS

Per the revised amendment practice, a complete listing of all claims in the application follows.

Claims 1-59 (Canceled).

60. (Currently amended) A method of processing a substrate comprising two active areas and an intervening insulating region, said method comprising:

depositing an oxide charge barrier over said substrate;

depositing an generally insulative material over said oxide charge barrier, wherein said generally insulative material is less insulative than said barrier; and providing a generally conductive element over said generally insulative material, wherein said element is generally laterally coextensive with said intervening insulating region.

- 61. (Currently amended) The method in claim 60, wherein said step of depositing an generally insulative material comprises depositing an generally insulative material that is allowed to comprise oxide charges.
- 62. (Previously presented) The method in claim 61, further comprising a step of plasma treating said substrate prior to said step of depositing an oxide charge barrier.
- 63. (Currently amended) The method in claim 61, further comprising: annealing said generally insulative material;

allowing an oxide charge in said generally insulative material to migrate toward said substrate in response to said annealing step; and intercepting said oxide charge with said oxide charge barrier before said oxide charge reaches said substrate.

64. (Currently Amended) The method in claim 61, further comprising refraining from depositing any generally conductive material before said step of depositing an generally insulative material.
